

Modelling the Ecosystem of Rossumøya

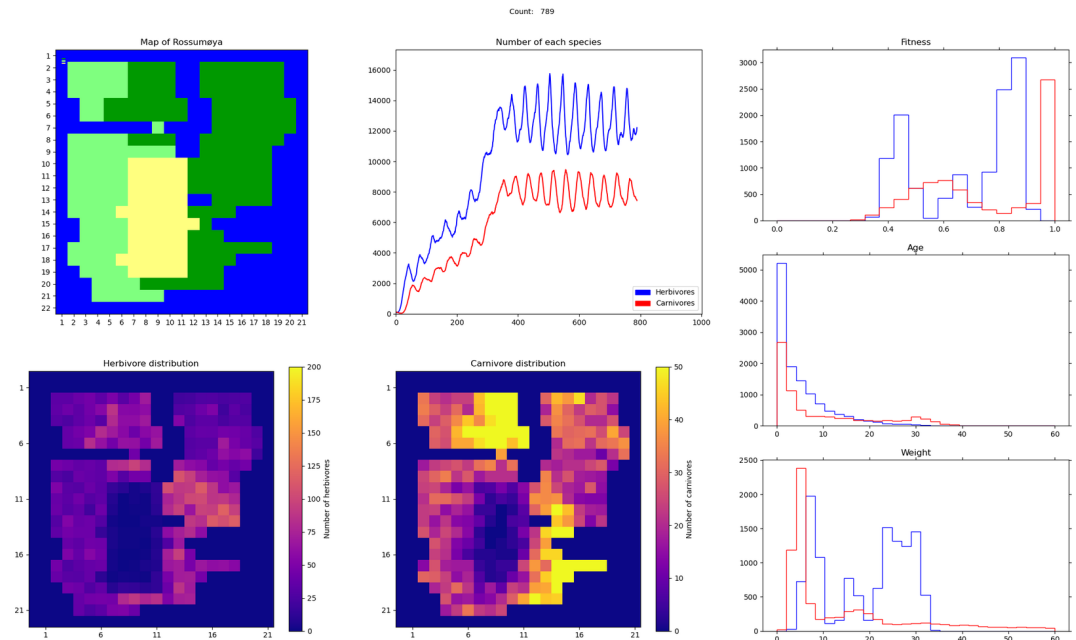

Why our code should be in use

- Tests covering the majority of our code
- Explanatory documentation, including examples
- Regular updates
 - Changelog v0.1.1
 - Fixed bug causing the initial population to be added each time `BioSim.simulate` was called
 - Corrected the colors of the «weight» histogram where herbivores were presented in red, but blue elsewhere
 - Implemented autoscaling of the y-axis in the line graph

Ease of use

- Examples and documentation included for usage
- Raise errors with feedback
- Easy to follow, understandable visualization
- Ability to save data to a .csv file

Reflection

- Results
- Limitations
 - Configuration – map, island, animals
- Documentation
- Optimization
- Reviewing code
